

The users who it is meant for :

Users who have a heavy work load that requires them to go back to files

Users who do a lot of multi tasking

Users that work within a virtual environment

Triva users stories

As a user of triva i want to use it to keep track of my clients websites stored locally so if i ever need to use a similar coding structure for another client i can have trivia to find out which file it is in the folder based off the date or name i have on that specific file

i want triva to summarize an old file that is ratherly long so i can continue with another task

I want trivia to give me an answer based off the facts that i give it and not an ai generated answer based off others experiences

I want triva to count the number of files i have in my folder

I want triva to break down the context of my file in a simplified way so that i can fully understand the task

Features:

Chat interface

file or folder upload

Triva homepage

Triva about page
